

# Assignment 10: Data Scraping

Cristiana Falvo

## Total points:

## OVERVIEW

This exercise accompanies the lessons in Environmental Data Analytics on time series analysis.

## Directions

1. Change “Student Name” on line 3 (above) with your name.
2. Work through the steps, **creating code and output** that fulfill each instruction.
3. Be sure to **answer the questions** in this assignment document.
4. When you have completed the assignment, **Knit** the text and code into a single PDF file.
5. After Knitting, submit the completed exercise (PDF file) to the dropbox in Sakai. Add your last name into the file name (e.g., “Salk\_A06\_GLMs\_Week1.Rmd”) prior to submission.

The completed exercise is due on Tuesday, April 7 at 1:00 pm.

## Set up

1. Set up your session:
  - Check your working directory
  - Load the packages `tidyverse`, `rvest`, and any others you end up using.
  - Set your ggplot theme

```
getwd()

## [1] "/Users/cristiana/Documents/Duke/DataAnalytics/Environmental_Data_Analytics_2020/Assignments"

library(tidyverse)
library(rvest)

my_theme <- mytheme <- theme_classic() +
  theme(axis.text = element_text(color = "black"),
        legend.position = "top")
theme_set(mytheme)
```

2. Indicate the EPA impaired waters website (<https://www.epa.gov/nutrient-policy-data/waters-assessed-impaired-due-nutrient-related-causes>) as the URL to be scraped.

```
url <- "https://www.epa.gov/nutrient-policy-data/waters-assessed-impaired-due-nutrient-related-causes"
webpage <- read_html(url)
```

3. Scrape the Rivers table, with every column except year. Then, turn it into a data frame.

```
State <- webpage %>% html_nodes("table:nth-child(8) td:nth-child(1)") %>% html_text()
Rivers.Assessed.mi2 <- webpage %>% html_nodes("table:nth-child(8) td:nth-child(2)") %>% html_text()
Rivers.Assessed.percent <- webpage %>% html_nodes("table:nth-child(8) td:nth-child(3)") %>% html_text()
```

```

Rivers.Impaired.mi2 <- webpage %>% html_nodes("table:nth-child(8) td:nth-child(4)") %>% html_text()
Rivers.Impaired.percent <- webpage %>% html_nodes("table:nth-child(8) td:nth-child(5)") %>% html_text()
Rivers.Impaired.percent.TMDL <- webpage %>% html_nodes("table:nth-child(8) td:nth-child(6)") %>% html_text()

Rivers <- data.frame(State, Rivers.Assessed.mi2, Rivers.Assessed.percent, Rivers.Impaired.mi2,
                     Rivers.Impaired.percent, Rivers.Impaired.percent.TMDL)

```

4. Use `str_replace` to remove non-numeric characters from the numeric columns.

5. Set the numeric columns to a numeric class and verify this using `str`.

```

# 4
Rivers$Rivers.Assessed.mi2 <- str_replace(Rivers$Rivers.Assessed.mi2,
                                           pattern = "[,]", replacement = "")
Rivers$Rivers.Assessed.percent <- str_replace(Rivers$Rivers.Assessed.percent,
                                              pattern = "[%]", replacement = "")
Rivers$Rivers.Assessed.percent <- str_replace(Rivers$Rivers.Assessed.percent,
                                              pattern = "[*]", replacement = "")
Rivers$Rivers.Impaired.mi2 <- str_replace(Rivers$Rivers.Impaired.mi2,
                                          pattern = "[,]", replacement = "")
Rivers$Rivers.Impaired.percent <- str_replace(Rivers$Rivers.Impaired.percent,
                                              pattern = "[%]", replacement = "")
Rivers$Rivers.Impaired.percent.TMDL <- str_replace(Rivers$Rivers.Impaired.percent.TMDL,
                                                    pattern = "[%]", replacement = "")
Rivers$Rivers.Impaired.percent.TMDL <- str_replace(Rivers$Rivers.Impaired.percent.TMDL,
                                                    pattern = "[±]", replacement = "")

# 5
str(Rivers)

## 'data.frame': 50 obs. of 6 variables:
## $ State : Factor w/ 50 levels "Alabama","Alaska",...: 1 2 3 4 5 6 7 8 9 10 ...
## $ Rivers.Assessed.mi2 : chr "10538" "602" "2764" "9979" ...
## $ Rivers.Assessed.percent : chr "14" "0" "3" "11" ...
## $ Rivers.Impaired.mi2 : chr "1146" "15" "144" "1440" ...
## $ Rivers.Impaired.percent : chr "11" "2" "5" "14" ...
## $ Rivers.Impaired.percent.TMDL: chr "53" "100" "6" "2" ...

Rivers$Rivers.Assessed.mi2 <- as.numeric(Rivers$Rivers.Assessed.mi2)
Rivers$Rivers.Assessed.percent <- as.numeric(Rivers$Rivers.Assessed.percent)
Rivers$Rivers.Impaired.mi2 <- as.numeric(Rivers$Rivers.Impaired.mi2)
Rivers$Rivers.Impaired.percent <- as.numeric(Rivers$Rivers.Impaired.percent)
Rivers$Rivers.Impaired.percent.TMDL <- as.numeric(Rivers$Rivers.Impaired.percent.TMDL)
str(Rivers)

## 'data.frame': 50 obs. of 6 variables:
## $ State : Factor w/ 50 levels "Alabama","Alaska",...: 1 2 3 4 5 6 7 8 9 10 ...
## $ Rivers.Assessed.mi2 : num 10538 602 2764 9979 32803 ...

```

6. Scrape the Lakes table, with every column except year. Then, turn it into a data frame.

```

Lake.State <- webpage %>% html_nodes("table:nth-child(14) td:nth-child(1)") %>% html_text()
Lakes.Assessed.mi2 <- webpage %>% html_nodes("table:nth-child(14) td:nth-child(2)") %>% html_text()

```

```
Lakes.Assessed.percent <- webpage %>% html_nodes("table:nth-child(14) td:nth-child(3)") %>% html_text()
Lakes.Impaired.mi2 <- webpage %>% html_nodes("table:nth-child(14) td:nth-child(4)") %>% html_text()
Lakes.Impaired.percent <- webpage %>% html_nodes("table:nth-child(14) td:nth-child(5)") %>% html_text()
Lakes.Impaired.percent.TMDL <- webpage %>% html_nodes("table:nth-child(14) td:nth-child(6)") %>% html_text()

Lakes <- data.frame(Lake.State, Lakes.Assessed.mi2, Lakes.Assessed.percent, Lakes.Impaired.mi2,
                    Lakes.Impaired.percent, Lakes.Impaired.percent.TMDL)
```

7. Filter out the states with no data.
8. Use `str_replace` to remove non-numeric characters from the numeric columns.
9. Set the numeric columns to a numeric class and verify this using `str`.

```
# 7
Lakes <- filter(Lakes, Lakes$Lake.State != "Hawaii" & Lakes$Lake.State != "Pennsylvania")

# 8
Lakes$Lakes.Assessed.mi2 <- str_replace(Lakes$Lakes.Assessed.mi2,
                                         pattern = "([,])", replacement = "")
Lakes$Lakes.Assessed.percent <- str_replace(Lakes$Lakes.Assessed.percent,
                                             pattern = "([,])", replacement = "")
Lakes$Lakes.Assessed.percent <- str_replace(Lakes$Lakes.Assessed.percent,
                                             pattern = "([*])", replacement = "")
Lakes$Lakes.Impaired.mi2 <- str_replace(Lakes$Lakes.Impaired.mi2,
                                         pattern = "([,])", replacement = "")
Lakes$Lakes.Impaired.percent <- str_replace(Lakes$Lakes.Impaired.percent,
                                             pattern = "([,])", replacement = "")
Lakes$Lakes.Impaired.percent.TMDL <- str_replace(Lakes$Lakes.Impaired.percent.TMDL,
                                                  pattern = "([,])", replacement = "")
Lakes$Lakes.Impaired.percent.TMDL <- str_replace(Lakes$Lakes.Impaired.percent.TMDL,
                                                  pattern = "([±])", replacement = "")

# 9
str(Lakes)

## 'data.frame':   48 obs. of  6 variables:
##  $ Lake.State      : Factor w/ 50 levels "Alabama","Alaska",...: 1 2 3 4 5 6 7 8 9 10 ...
##  $ Lakes.Assessed.mi2 : chr  "430.976" "5981" "114976" "64778" ...
##  $ Lakes.Assessed.percent : chr  "88" "0" "34" "13" ...
##  $ Lakes.Impaired.mi2   : chr  "81740" "1137" "4895" "6513" ...
##  $ Lakes.Impaired.percent : chr  "19" "19" "4" "10" ...
##  $ Lakes.Impaired.percent.TMDL: chr  "53" "73" "9" "71" ...

Lakes$Lakes.Assessed.mi2 <- as.numeric(Lakes$Lakes.Assessed.mi2)

## Warning: NAs introduced by coercion

Lakes$Lakes.Assessed.percent <- as.numeric(Lakes$Lakes.Assessed.percent)
Lakes$Lakes.Impaired.mi2 <- as.numeric(Lakes$Lakes.Impaired.mi2)
Lakes$Lakes.Impaired.percent <- as.numeric(Lakes$Lakes.Impaired.percent)
Lakes$Lakes.Impaired.percent.TMDL <- as.numeric(Lakes$Lakes.Impaired.percent.TMDL)
str(Lakes)

## 'data.frame':   48 obs. of  6 variables:
##  $ Lake.State      : Factor w/ 50 levels "Alabama","Alaska",...: 1 2 3 4 5 6 7 8 9 10 ...
##  $ Lakes.Assessed.mi2 : num  431 5981 114976 64778 NA ...
```

```
## $ Lakes.Assessed.percent      : num  88 0 34 13 50 95 47 100 54 82 ...
## $ Lakes.Impaired.mi2         : num  81740 1137 4895 6513 473954 ...
## $ Lakes.Impaired.percent     : num   19 19 4 10 45 7 12 88 82 2 ...
## $ Lakes.Impaired.percent.TMDL: num   53 73 9 71 NA 0 7 69 NA 20 ...
```

```
colnames(Lakes)[1] <- "State"
```

10. Join the two data frames with a `full_join`.

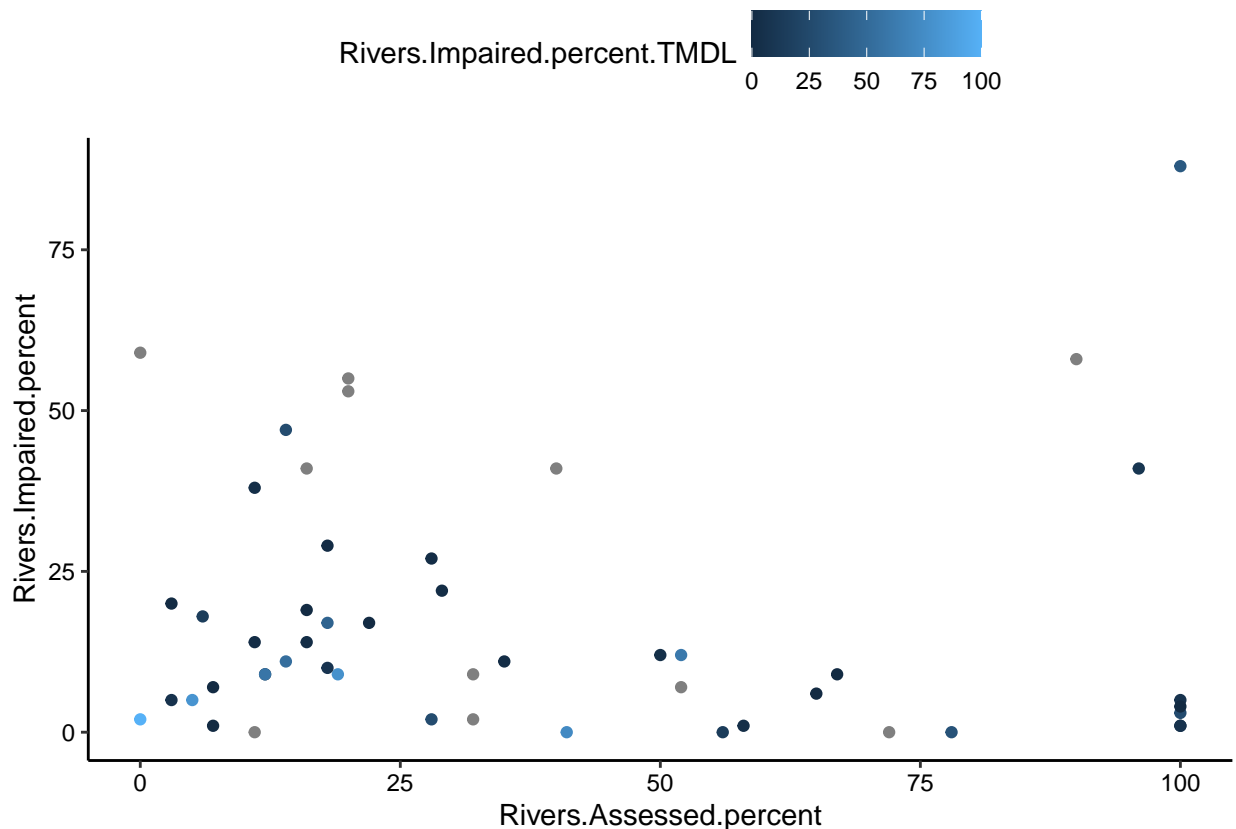

```
Combined_Rivers_Lakes <- full_join(Rivers, Lakes, by = NULL)
```

```
## Joining, by = "State"
```

11. Create one graph that compares the data for lakes and/or rivers. This option is flexible; choose a relationship (or relationships) that seem interesting to you, and think about the implications of your findings. This graph should be edited so it follows best data visualization practices.

(You may choose to run a statistical test or add a line of best fit; this is optional but may aid in your interpretations)

```
River_plot <-
  ggplot(Combined_Rivers_Lakes, aes(x = Rivers.Assessed.percent, y = Rivers.Impaired.percent,
                                     color = Rivers.Impaired.percent.TMDL)) +
  geom_point()
print(River_plot)
```

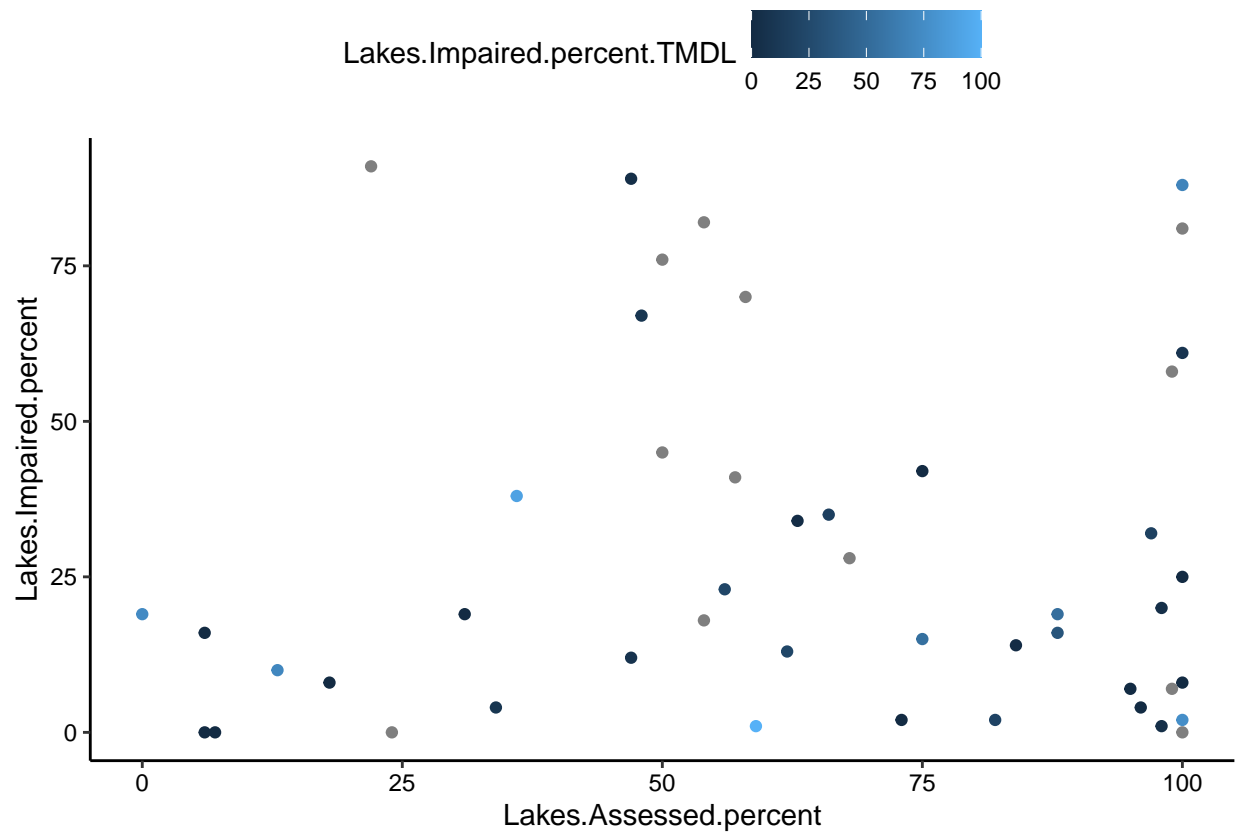

```
Lake_plot <-
  ggplot(Combined_Rivers_Lakes, aes(x = Lakes.Assessed.percent, y = Lakes.Impaired.percent,
                                     color = Lakes.Impaired.percent.TMDL)) +
```

```
geom_point() +
xlim(0, 100)

print(Lake_plot)
```

## Warning: Removed 3 rows containing missing values (geom\_point).

- Summarize the findings that accompany your graph. You may choose to suggest further research or data collection to help explain the results.

There doesn't seem to be a strong correlation between the percentage of water bodies assessed and the percentage of water bodies impaired for neither lakes nor rivers.
